

Lo-co-gov-3.0

Tuesday October 20th 1300-1430

<https://zoom.us/j/7977057858>

An interactive *Mind-Lab* on **local** empowerment, **collaborative** (co)-**governance**, and the potential for a *collective local intelligence*, at a time of uncertainty and disruption....

Also – a launch event for the [Deeper-City-Collective-Intelligence-and-the-Pathways-from-Smart-to-Wise](#),

Speaker /facilitator: *Joe Ravetz, University of Manchester UK*

Chair / host: *coming shortly*

Panel: *coming shortly*

THE CHALLENGE

Right now the pandemic has sucked the life-blood from our cities, and the most vulnerable are the hardest hit. But crisis also brings the possibility of transformation – from the details of urban design to the local livelihoods and social cohesion.

This is the agenda of the *Lo-co-gov-3.0*: This is more than government and smart technology, it's about how people and organizations and public services can learn and think together, and create new ways of living and working – an overall *collective local intelligence*. Many projects are pointing in the same direction, such as the Looper project on local learning - www.looperproject.eu

To explore this *Lo-co-gov-3.0* agenda we need ways to think out of the box, beyond normal limits. So we follow the *Mind-Lab* model of interactive visual dialogues. This helps to explore *deeper* problems, the potential of *collective intelligence*, and mapping of *pathways* for transformation. At the moment the discussion is online – different to onsite interaction, but with some benefits (lower carbon / easier participation). We use the synergistic toolkit for mapping & designing with collective intelligence, www.manchester.ac.uk/synergistics. For online visual thinking, try the sample interactive [collaboratorium-demo](#).
